# Index

Page numbers in **bold** indicate figures, tables, and photos.

alpha (particle, emission), 200, 499

Amaldi, Edoardo, 173

American Chemical Society (ACS) April 1989 meeting, 7–8, 20, 22, 102, 106, **152**, 159–160, 163, 230, 291, 488

Pons speaking at, 118, 131, 150, 151–162, 182

American Institute of Physics (AIP), 28, 231, 232, 414–416

American Physical Society (APS) May 1989 meeting, 150, 229–231, 237–238, 241, 272, 492–493

criticisms against Fleischmann and Pons, 26–27, 28–29, 151, 201, 204, 216, 227–268, 270, 278, 279, 287, 492

gamma-ray errors, 217, 237, 241–242

Park as spokesperson for, 357, 414

partial experimental confirmations, 253, 269, 270

American Society of Mechanical

Engineers, 427–428, 429, 441, 496

Anderson, Mark, 76, 214

Andreani, Roberto, 173

Anomalous Nuclear Effects in

Deuterium/Solid Systems Conference (BYU), 460, 497

Appleby, Anthony John "John," 109–110, 117, 297–298, **298**, 307, 336, 337–338, 360, 373, 380, 406, 413, 414, 491, 493

Argonne National Laboratory, 373, 375, 385

Arizona State University, 262

Arnold, Roxane (at *Los Angeles Times*), 105

Ashley, Kevin, 98–99

Asimov, Isaac, 7, 12, 213

Associated Press (AP), 102, 103, 104, 112, 156, 167, 205, 228, 267, 425, 428, 468, 492, 495

AT&T Bell Labs, 132, 137, 156, 278, 359, 387

Atomic Energy Commission of India, 438

Atomic Energy Society of Japan, 405, 495

Ball, Philip (at *Nature*), 43

Ballif, Jae, 20, 22, 24, 29–30

Ballinger, Ronald G., 184, 186, 192, 201–206, 216–217, 440, 492

Bangerter, Norman "Norm," 228, **346**, 350, 491

Bard, Allen J., 106–107, 152, 154, 410  
on ERAB Panel, 359, 406–407, 417–418, 422, 463, 465, 503, 504

Bardi, Ugo, 325

Barnes, Charles "Charlie," 329

Battelle Memorial Institute, 373

Bazell, Robert, 98, 381–382

BBC-TV *Horizon* (TV series), 448–449, 450, 470

Bearden, Tom, 67

Beaudette, Charles, 99, 168, 252, 259, 293, 446

Bell, John, 119

Bell Labs. *See* AT&T Bell Labs

Benfatto, Ivone, 42

Berners-Lee, Tim, 10

Bernstein, Robert, 399

beta (particle, emission), 200, 322, 499

beta decay, 482

Bethe, Hans, 81, 86, 192–193, 484

Bhabha Atomic Research Centre (BARC),

175, 311–324, **318**, **320**, **321**, 326, 337, 338, 377, 378, 419–421, **420**, 426, 438–439, 456, 457, 460, 462, 490, 494

BARC-1500 report, 312, 323–324,

404, 430, 438, 462, 495

results discussed by ERAB panel,

390, 395–396, 398, 402, 404, 419, 431–432, 495

variation of the ENEA Frascati

experiment, 322–324, **327**, **328**

Biberian, Jean-Paul, 390

Bigeleisen, Jacob, 371, 373, 385, 397–

398, 407, 426, 433, 453, 503, 504

biological transmutations, 135, 484

Birnbaum, Howard K., 503, 504

# About the Author

Steven B. Krivit lives in San Rafael, California, and is an investigative science journalist and international speaker. He studied industrial design at the University of Bridgeport (Connecticut) and completed his bachelor's degree in business administration and information technology at National University (Los Angeles). He was a computer network systems engineer until 2000, when he became curious about low-energy nuclear reaction (LENR) research. He founded the

*New Energy Times* Web site and online news service to share what he learned. By 2016, he had spoken with nearly all the scientists who were involved in the field. He has lectured nationally and international to scientific as well as lay audiences. He has advised the U.S. intelligence community, the U.S. Library of Congress, members of the Indian Atomic Energy Commission and the interim executive director of the American Nuclear Society. He is the leading author of review articles and chapters about LENRs, including invited papers for the Royal Society of Chemistry (2009), Elsevier (2009 and 2013) and John Wiley & Sons (2011). He was an editor for the American Chemical Society 2008 and 2009 technical reference books on LENRs and editor-in-chief for the 2011 Wiley *Nuclear Energy Encyclopedia*.

Krivit was the first science journalist to publicly identify and teach the distinctions between the unproven theory of "cold fusion" and the experimentally confirmed neutron-catalyzed LENRs. He did so in 2008 at the 236th national meeting of the American Chemical Society. His chapters in the *Elsevier Encyclopedia of Electrochemical Power Sources* were the first chapters on LENRs in a print encyclopedia.

# Other Volumes in This Series

## *Hacking the Atom: Explorations in Nuclear Research, Vol. 1*

This book shows, for the first time, why low-energy nuclear reaction phenomena are not the result of fusion, why they are the result of nuclear processes, and why they can now be explained by a feasible theory. The theory does not conflict with existing physics but expands scientific knowledge and reveals a new field of nuclear science.

## *Lost History: Explorations in Nuclear Research, Vol. 3*

This book explores the story of forgotten chemical transmutation research during the 1910s and 1920s, a precursor to modern low-energy nuclear reactions research. This work has been obscured and absent in the dialogue of the scientific community for a century.
