## The Genesis Team

Genesis World Energy is a technology development, production and supply consortium whose key members have spent much of their careers developing pivotal technologies for defense and space programs. Their contribution ranges from defending the world's nations from nuclear holocaust, to taking man to the moon and exploring the depths of space.

In September 2000, a plan to create a new, practical source of energy out of the hydrogen and oxygen in water was put in to motion. By early 2001, a team of over 400 visionaries from a wide spectrum of disciplines, including science, technology and engineering, was assembled to crack the scientific and technological breakthroughs necessary to make this technology possible. This team of dedicated men and women who have very diverse ethnic, religious and political backgrounds were able to set aside their differences for the common benefit of mankind. With a focused mission, they accomplished what no one else has — the ability to harness an unlimited source of energy from the molecular structure of water. An achievement that will change the face of energy as we know it.

But it isn't the recognition, fame or fortune that motivated the Genesis team to pursue this challenge. In fact, they desire to remain in the background, letting the technology receive the attention. Rather, it is their passion to make a positive difference in the world that compels them. To provide the world's people with access to a low cost, abundant energy resource. To protect the earth's natural resources from depletion and pollution. And to invest in future generations through the support of educational, environmental and charitable causes, and the perpetual advancement of this technology.

Call it fate or divine inspiration, but the Genesis team knows that every aspect of this journey came together by design. From every team member and each successful milestone, to the amazingly short development process — this scientific breakthrough is nothing short of a miracle.
