## PREFACE

The study of Condensed Matter Nuclear Science (CMNS) has continued to advance through 11 past conferences (ICCF1 at Utah, USA in 1989 to ICCF11 at Marseilles, France in 2004) and many new compelling scientific findings are becoming known. The historical 1989 claim of "cold fusion" had renewed hope of a portable clean nuclear reactor. The subsequent great wave of denial and hostility forced the claim and further research efforts out of mainstream science. Nevertheless, due to misconceptions and misinformation, very few people know that several hundred researchers from around the world have continued this research during the past 16 years. The efforts by this faint stream of research have now revealed that there exist new kinds of nuclear effects directly related to the nature of condensed matter. The nuclear effects in condensed matter are much more than real "cold fusion"; they include important nuclear effects such as transmutations and resulting release of energy as significant heat with minimal and safe radiation. Low levels of radiation are found in at least some reactions, but are usually absorbed within the cell itself so the system is categorically safe. Through discussions at international conferences (ICCF1-ICCF11), a majority of researchers agreed that the name "cold fusion" was misleading. A new name, closer to the exact phenomenon, Condensed Matter Nuclear Science, is most appropriate.

This emerging field, CMNS, treats nuclear effects in and/or on condensed matter, targeting its application for portable clean nuclear sources. This is an inter- and multi-disciplinary academic field, including nuclear physics, condensed matter physics, surface physics, and chemistry and electrochemistry. CMNS applications involve many other fields of science and technology (nuclear engineering, mechanical engineering, electrical engineering, laser science and engineering, material science, nano-technology, biotechnology, energy politics, etc. To promote the development of CMNS and establish the academic field of CMNS, the field needs highly efficient, cooperative efforts of researchers, and related people working in different fields. International linkage and collaborations are also needed.

The full name of this conference is the *12th International Conference on Condensed Matter Nuclear Science*. However, we decided to keep the acronym ICCF12 for the Conference, considering our original standpoint and tradition.

The International Society for Condensed Matter Nuclear Science (ISCMNS) made a start in 2004 to promote the understanding, development and application of CMNS and has become a main supporting body of the ICCF series conferences till ICCF11. However, ICCF12 is sponsored by other societies like JCF (Japan-CF Research Society) and supported also by non-ISCMNS members. ICCF12 will provide an international scientific forum for direct interaction and stimulation among many scientists working in the CMNS field and participation and presentation of newcomers will be welcome.

The Conference site and date were: Shin-Yokohama Prince Hotel, Yokohama-city, Japan on 27 November–2 December 2005.

The following topics were discussed in the conference:

- Excess Heat and Related Nuclear Products.
- Nuclear Processes and Transmutations.
- Materials and Condensed Matter Conditions.
- Analyses and Diagnoses Techniques.
- Innovative Approaches.
- Theories on Condensed Matter Nuclear Effects.
- Engineering, Industrial, Political, and Philosophical Issues.

For organizing and preparing ICCF12, the following members of LOC (Local Organizing Committee) and IAC (International Advisory Committee) have made contributions.

#### Local Organizing Committee

Akito Takahashi, Chairman, Osaka University, Japan.  
 Ken-ichiro Ota, Co-chairman, Yokohama National University, Japan.  
 Yasuhiro Iwamura, Co-chairman, Mitsubishi Heavy Industries, Japan.  
 Shigenori Mitsushima, Secretary, Yokohama, National University, Japan.  
 Shinya Narita, Secretary, Iwate University, Japan.  
 Hiroshi Yamada, Iwate University, Japan.  
 Tadahiko Mizuno, Hokkaido University, Japan.  
 Akira Kitamura, Kobe University, Japan.  
 Kazuaki Matsui, Institute of Applied Energy, Japan.  
 Koichi Tomimura, The Thermal and Electric Energy Technology Foundation, Japan.

#### International Advisory Committee

Tullio Bressani, Department of di Fisica Sperimentale, Universita di Torino, Italy.  
 Francesco Celani, INFN, Frascati, Italy.  
 Antonella De Ninno, ENEA, Frascati, Italy.  
 Peter Hagelstein, MIT, USA.  
 Akito Takahashi, Osaka University, Japan.  
 Ken-ichiro Ota, Department of Energy and Safety Engineering, Yokohama, National University, Japan.  
 Jirohta Kasagi, Laboratory for Nuclear Science, Tohoku University, Japan.  
 Yasuhiro Iwamura, Mitsubishi Heavy Industries, Japan.  
 Xing Zhong Li, Tsinghua University, China.  
 Andrei Lipson, Institute of Physical Chemistry, The Russian Academy of Sciences, Moscow, Russia.

Michael McKubre, SRI International, USA.  
 George Miley, Fusion Studies Laboratory, University of Illinois, USA.  
 Nikolai Samsonenko, People Friendship University, Russia.  
 Francesco Scaramuzzi, ENEA, Frascati (retired), Italy.  
 Mahadeva Srinivasan, BARC (retired), India.  
 Edmund Storms, Lattice Energy, LLC, USA.  
 William Collis, ISCMNS.  
 Jean Paul Biberian, University of Marseilles Luminy, France (Chairman, ICCF11).  
 Yuri Bazhutov, Institute of Terrestrial Magnet, Russia (Chairman, ICCF13).

### Sponsors of ICCF12

ISCMNS: International Society for Condensed Matter Nuclear Science.  
 TEET: Thermal and Electric Energy Technology Foundation.  
 JCF: Japan CF-Research Society.

All the full papers submitted for Proceedings book were peer-reviewed by the specialists from Japan. Revised drafts were edited, converted into LaTeX format and send to the publisher (World Scientific Publishing Co. Pte. Ltd., Singapore).

For some of the presentations at the meeting of ICCF12, authors did not submit full papers and those papers are not included in the Proceedings book.

Due to trivial mistake, a few papers submitted to ICCF11 (Marseilles) Proceedings could not be included in the Proceedings of ICCF11 (published by World Scientific Co, 2006). These missing papers by Dr. V. Violante group are included in the present book for compensation.

# CONTENTS

Preface	v
<b>1. GENERAL</b>	
Progress in condensed matter nuclear science <i>A. Takahashi</i>	1
Summary of ICCF-12 <i>X. Z. Li</i>	26
Overview of light water/hydrogen-based low-energy nuclear reactions <i>G. H. Miley and P. J. Shrestha</i>	34
<b>2. EXCESS HEAT AND He DETECTION</b>	
Development of "DS-reactor" as the practical reactor of "cold fusion" based on the "DS-cell" with "DS-cathode" <i>Y. Arata and Y.-C. Zhang</i>	44
Progress in excess of power experiments with electrochemical loading of deuterium in palladium <i>V. Violante, S. Moretti, M. Bertolotti, E. Castagna, C. Sibia, F. Sarto, M. McKubre, F. Tanzella, I. Dardik, S. Lesin and T. Zilov</i>	55
Anomalous energy generation during conventional electrolysis <i>T. Mizuno and Y. Toriyabe</i>	65
"Excess heat" induced by deuterium flux in palladium film <i>B. Liu, X. Z. Li, Q. M. Wei, N. Mueller, P. Schoch and H. Oehre</i>	75
Abnormal excess heat observed during Mizuno-type experiments <i>J.-F. Fauvarque, P. P. Clauzon and G. J.-M. Lallevé</i>	80
Seebeck envelope calorimetry with a Pd D <sub>2</sub> O + H <sub>2</sub> SO <sub>4</sub> electrolytic cell <i>W.-S. Zhang, J. Dash and Q. Wang</i>	86
Observation and investigation of nuclear fusion and self-induced electric discharges in liquids <i>A. I. Koldamasov, H. I. Yang, D. B. McConnell, A. A. Kornilova, V. I. Vysotskii and A. V. Desyatov</i>	97

Description of a sensitive seebeck calorimeter used for cold fusion studies	108
<i>E. Storms</i>	
Some recent results at ENEA	117
<i>M. Apicella, E. Castagna, L. Capobianco, L. D'Aulerio, G. Mazzitelli, F. Sarto, A. Rosada, E. Santoro, V. Violante, M. McKubre, F. Tanzella and C. Sibilìa</i>	
Heat measurement during plasma electrolysis	133
<i>K. Iizumi, M. Fujii, S. Mitsushima, N. Kamiya and K.-I. Ota</i>	
Effect of an additive on thermal output during electrolysis of heavy water with a palladium cathode	140
<i>Q. Wang and J. Dash</i>	
Thermal analysis of calorimetric systems	145
<i>L. D'Aulerio, V. Violante, E. Castagna, R. Fiore, L. Capobianco, PR. Del Prete, F. Tanzella and M. McKubre</i>	
Surface plasmons and low-energy nuclear reactions triggering	156
<i>E. Castagna, C. Sibilìa, S. Paoloni, V. Violante and F. Sarto</i>	
Production method for violent TCB jet plasma from cavity	163
<i>F. Amini</i>	
New results and an ongoing excess heat controversy	171
<i>L. Kowalski, G. Luce, S. Little and R. Slaughter</i>	

### 3. TRANSMUTATION

Observation of surface distribution of products by X-ray fluorescence spectrometry during $D_2$ gas permeation through Pd Complexes	178
<i>Y. Iwamura, T. Itoh, M. Sakano, N. Yamazaki, S. Kuribayashi, Y. Terada and T. Ishikawa</i>	
Discharge experiment using Pd/CaO/Pd multi-layered cathode	188
<i>S. Narita, H. Yamada, D. Takahashi, Y. Wagatsuma, S. Taniguchi and M. Itagaki</i>	
Producing transmutation element on multi-layered Pd sample by deuterium permeation	196
<i>H. Yamada, S. Narita, S. Taniguchi, T. Ushirozawa, S. Kurihara, M. Higashizawa, H. Sawada, M. Itagaki and T. Odashima</i>	

- Experimental observation and combined investigation of high-performance fusion of iron-region isotopes in optimal growing microbiological associations 206  
*V. I. Vysotskii, A. A. Kornilova, A. B. Tashirev and J. Kornilova*
- Research into low-energy nuclear reactions in cathode sample solid with production of excess heat, stable and radioactive impurity nuclides 214  
*A. B. Karabut*
- Influence of parameters of the glow discharge on change of structure and the isotope composition of the cathode materials 231  
*I. B. Savvatimova and D. V. Gavritenkov*
- Elemental analysis of palladium electrodes after Pd/Pd light water critical electrolysis 253  
*Y. Toriyabe, T. Mizuno, T. Ohmori and Y. Aoki*
- Progress on the study of isotopic composition in metallic thin films undergone to electrochemical loading of hydrogen 264  
*M. Apicella, V. Violante, F. Sarto, A. Rosada, E. Santoro, E. Castagna, C. Sibilìa, M. McKubre, F. Tanzella and G. Hubler*
- In situ* accelerator analyses of palladium complex under deuterium permeation 272  
*A. Kitamura, R. Nishio, H. Iwai, R. Satoh, A. Taniike and Y. Furuyama*
- High-resolution mass spectrum for deuterium (hydrogen) gas permeating palladium film 278  
*Q. M. Wei, X. Z. Li, B. Liu, N. Mueller, P. Schoch and H. Oehre*
- ICP-MS analysis of electrodes and electrolytes after HNO<sub>3</sub>/H<sub>2</sub>O electrolysis 284  
*S. Taniguchi, S. Shimadu, H. Yamada, S. Narita, T. Odashima, N. Teshima and T. Ohmori*
- The Italy-Japan project — Fundamental research on cold transmutation process for treatment of nuclear wastes 289  
*A. Takahashi, F. Celani and Y. Iwamura*

## 4. NUCLEAR PHYSICS APPROACH

- Reproducible nuclear emissions from Pd/PdO:D<sub>x</sub> heterostructure during controlled exothermic deuterium desorption 293  
*A. G. Lipson, G. H. Miley, A. S. Roussetski, B. F. Lyakhov and E. I. Saunin*
- Correct identification of energetic alpha and proton tracks in experiments on CR-39 charged particle detection during hydrogen desorption from Pd/PdO:H<sub>x</sub> heterostructure 304  
*A. S. Roussetski, A. G. Lipson, B. F. Lyakhov and E. I. Saunin*
- Intense non-linear soft X-ray emission from a hydride target during pulsed D bombardment 314  
*G. H. Miley, Y. Yang, A. Lipson, M. Haque, I. Percel and M. Romer*
- Enhancement of first wall damage in ITER type TOKAMAK due to LENR effects 325  
*A. G. Lipson, G. H. Miley and H. Momota*
- Generation of DD-reactions in a ferroelectric KD<sub>2</sub>PO<sub>4</sub> single crystal during transition through curie point ( $T_c = 220$  K) 336  
*A. G. Lipson, G. H. Miley, A. S. Roussetski and E. I. Saunin*
- Study of energetic and temporal characteristics of X-ray emission from solid-state cathode medium of high-current glow discharge 344  
*A. B. Karabut*
- A novel LiF-based detector for X-ray imaging in hydrogen loaded Ni films under laser irradiation 351  
*R. M. Montereali, S. Almagiva, T. Marolo, M. A. Vincenti, F. Sarto, C. Sibilis, E. Castagna and V. Violante*
- Observation and modeling of the ordered motion of hypothetical magnetically charged particles on the multilayer surface and the problem of low-energy fusion 356  
*S. V. Adamenko and V. I. Vysotskii*

## 5. MATERIAL SCIENCE

- Evidence of superstoichiometric H/D lenr active sites and high-temperature superconductivity in a hydrogen-cycled Pd/PdO 367  
*A. G. Lipson, C. H. Castano, G. H. Miley, B. F. Lyakhov, A. Yu. Tsvadze and A. V. Mitin*

New procedures to make active, fractal-like surfaces on thin Pd wires <i>F. Celani, A. Spallone, E. Righi, G. Trenta, G. D'Agostaro, P. Quercia, V. Andreassi, O. Giacinti, P. Marini, V. Di Stefano, M. Nakamura, F. Todarello, E. Purchi, A. Mancini, P. G. Sona, F. Fontana, L. Gamberale, D. Garbelli, E. Celia, F. Falcioni, M. Marchesini, E. Novaro and U. Mastromatteo</i>	377
Using resistivity to measure H/Pd and D/Pd loading: Method and significance <i>M. C. H. McKubre and F. L. Tanzella</i>	392
Measurements of the temperature coefficient of electric resistivity of hydrogen overloaded Pd <i>A. Spallone, F. Celani, P. Marini and V. Di Stefano</i>	404
Magnetic interaction of hypothetical particles moving beneath the electrode/electrolyte interface to elucidate evolution mechanism of vortex appeared on Pd surface after long-term evolution of deuterium in 0.1 m LiOD <i>H. Numata and M. Ban</i>	411
Unusual structures on the material surfaces irradiated by low-energy ions <i>B. Rodionov and I. Savvatimova</i>	421
<b>6. THEORY</b>	
Context for understanding why particular nanoscale crystals turn-on faster and other LENR effects <i>S. R. Chubb</i>	430
Models for anomalies in condensed matter deuterides <i>P. L. Hagelstein</i>	441
Time-dependent EQPET analysis of TSC <i>A. Takahashi</i>	454
Unifying theory of low-energy nuclear reaction and transmutation processes in deuterated/hydrogenated metals, acoustic cavitation, glow discharge, and deuteron beam experiments <i>Y. E. Kim and A. L. Zubarev</i>	462

Catalytic fusion and the interface between insulators and transition metals <i>T. A. Chubb</i>	473
Multiple scattering of deuterium wave function near surface of palladium lattice <i>X. Z. Li, Q. M. Wei, B. Liu, N. N. Cai, S. X. Zheng and D. X. Cao</i>	482
Theoretical comparison between semi-classical and quantum tunneling effect <i>F. Frisone</i>	494
New cooperative mechanisms of low-energy nuclear reactions using super low-energy external field <i>F. A. Gareev and I. E. Zhidkova</i>	504
Polynutron theory of transmutation <i>J. C. Fisher</i>	516
The thermal conduction from the centers of the nuclear reactions in solids <i>K.-I. Tsuchiya</i>	521
Four-body RST general nuclear wavefunctions and matrix elements <i>I. Chaudhary and P. L. Hagelstein</i>	527
Study on formation of tetrahedral or octahedral symmetric condensation by hopping of alkali or alkaline-earth metal ion <i>H. Miura</i>	536
Calculations of nuclear reactions probability in a crystal lattice of lanthanum deuteride <i>V. A. Kirkinskii and Yu. A. Novikov</i>	542
Possible coupled electron and electron neutrino in nucleus and its physical catalysis effect on D-D cold fusion into helium in Pd <i>M. Fukuhara</i>	547
Tunnel resonance of electron wave and force of fluctuation <i>M. Ban</i>	555
Types of nuclear fusion in solids <i>N. Yabuuchi</i>	564

Neutrino-dineutron reactions (low-energy nuclear reactions induced by D <sub>2</sub> gas permeation through Pd complexes — Y. Iwamura effect) <i>V. Muromtsev, V. Platonov and I. Savvatimova</i>	571
An explanation of earthquakes by the blacklight process and hydrogen fusion <i>H. Yamamoto</i>	577
Theoretical modeling of electron flow action on probability of nuclear fusion of deuterons <i>A. I. Goncharov and V. A. Kirkinskii</i>	582
Author Index	589
