Dear Dr. McKubre,

In regard to your 2000 adjustment of the 1994 MeV/4He interpreted values, as reported in New Energy Times issue #34, a source has informed me that you claim that your adjustment is:

1. Explained by the fact that you and your coauthors made a calculation error in the report. (([Development of Energy Production Systems from Heat Produced in Deuterated Metals, Volume 1](#), TR-107843-V1, June 1998) and
2. that you explained this calculation error and presented the correction at ICCF-8.

I have been unable to find any mention of any such calculation error or correction in either your ICCF-8 paper or in a [news report](#) of your presentation.

Can you please explain or direct me to a document that explains this calculation error and correction?

I would need your response by noon tomorrow (Friday).

Thank you,

Steven B. Krivit
