Subject: NASA supports E-Cat technology claims

Dear Dick,

Here is independent evidence from three of NASA's senior scientists, that Andrea Rossi's E-Cat technology is real.

In fact, to the best of my understanding one of the first sales that has already been made of the 1Mw E-Cat is to NASA. I'll confirm this as soon as I have the explicit information.

All we need is \$200K initial risk capital from yourself to secure the Australasian exclusive licence.

Dear Andrea Rossi is waiting for Byron New Energy to obtain the funding. We have built up a very good relationship with dear Andrea, and I believe he likes BNE's honesty and humanitarian values, as well as our commercially oriented Market Strategy

Leonardo Corp --> BNE --> 'for profit' Sales organisations --> Customer

There is plenty of money for everyone.

This is an opportunity not only to make large amounts of money, but to be part of the introduction of new clean green technology for our beautiful Planet and our Peoples and to alleviate Poverty.

Love and peace,

Solihin Millin
