Dear Colleagues of CMNS,

to-day, Monday 24, I found over 50 messages about the possible source of errors in Rossi experiment arising from mixing water and vapor.

* I guess that NOBODY of You received the mail sent by Rossi on Friday 21, 2011.

Please, read the very short sentences, in capital letters, about.

I hope that after reading all of You will understand more.

See all of You at Chennai next week: it was decided, by the organiser Srinivasan with the help of Aki to Takahashi, a SHORT report on Rossi experiment the first day of the Conference.

The reports, 2 in total, will be given by Michael Melich (USA) and myself.

My best,

Francesco CELANI
