Subject: Re: Short comments on report, by G. Levi, on Rossi-Focardi experiment held
Jan. 14, 2011 at Bologna-Italy.

DEAR SIRs,

WE ALWAYS WORKED WITH WATER, NOT STEAM, IN THE FORMER TESTS WE MADE
ALL THE WORLD AROUND. WE ALSO USED AIR. ALL THE DATA COINCIDE. I
BELIEVE IN THE WORK OF DR GALANTINI, WHO SAID THAT THE STEAM WAS DRY,
BECAUSE I AM PRETTY CONVINCED THAT HE IS ABLE TO ESTABLISH IF A FLOW
OF STEAM IS DRY OR NOT. IN ANY CASE:

THE AMOUNT OF ENERGY AT THE OUTPUT SHOULD BE OBTAINED ALSO IF AT 102
CELSIUS DEGREES WE HAD JUST WATER (WHICH IS IMPOSSIBLE), NOT STEAM. I
MEAN: IN THE WORST IMAGINABLE SCENARIO WE GOT OUR STRONG SURPLUS
RESPECT ELECTROCHEMICAL PRODUCTION. THIS IS JUST A CALCULATION BY
ABSURD, BECAUSE THE STEAM WAS DRY, AS CALCULATED BY GALANTINI. AND: WE
WILL SEE IT BETTER IN THE PLANTS THAT ARE GOING TO BE PUT IN
INDUSTRIAL OPERATION.
