

Hacking The Atom, By Steven B. Krivit

List of images and figures

#	Caption / Title	Page
1	Nullius in Verba, the motto of the Royal Society of Great Britain	xvi
2	Michael McKubre (2007), Peter Hagelstein (2004) Photos: S.B. Krivit; Michael Melich (2008) Photo: D. Tran	2
3	Mahadeva Srinivasan, Eugene Mallove, Thomas Passell, Douglas Morrison (2000) Photo: Barbara DelloRusso	8
4	Melvin Miles (Photo: S.B. Krivit)	9
5	Portion of survey response sent from Lawrence Livermore National Laboratory researchers to the ERAB panel	13
6	Royal College of Science in Electrochemistry Group 1947-1948	21
7	John O'Mara Bockris (Photo: Jean Wulfson)	23
8	Diagram of deuterium and helium-3 atoms	30
9	Diagram of helium-3 and helium-4 atoms	31
10	Diagram of carbon-12 atom	32
11	Nucleosynthetic pathways from platinum and mercury to gold	39
12	Reiko Notoya and Douglas Morrison (1996) Photo: Unknown	50
13	Slide discussing BARC light-water research. (Ramamurthy, 1993)	60
14	Deuterium-deuterium fusion reaction equation	61
15	Yan Kucherov, Alexander B. Karabut and Irina B. Savvatimova (circa 1990)	67
16	Irina Savvatimova (1998) Photo: Unknown	69
17	John Dash (2008) Photo: D. Tran	76
18	Corissa Lee, 2003 Photo: S.B. Krivit	78
19	Valat experiment - palladium isotope shifts	86
20	Silver was found in the newly formed craters. Concentration was five times greater inside the craters than in spots outside of craters. (Zhang et al., 2007)	87
21	Volcano-like structures in a SEM image of an electrode surface after an experiment. Scale: 50 micrometers, magnification: 1,000x. (Valat, 2011)	88
22	Volcano-like structures in a SEM image of an electrode surface after an experiment. Scale: 10 micrometers; magnification: 5,000x. (Valat, 2011)	88
23	SIMS versus SEM/EDX spectroscopy	90
24	Portions of palladium to silver nucleosynthetic pathways	98

25	Mizuno - Pd/D electrolysis experiment transmutation analysis; change in abundances of elements	132
26	Mizuno - elements observed before and after electrolysis	133
27	Mizuno - isotopic shifts, lower mass number range	134
28	Mizuno - isotopic shifts, middle mass number range	134
29	Mizuno - isotopic shifts, upper mass number range	135
30	Mizuno - LENR isotopic shifts in palladium	135
31	Mizuno - LENR isotopic shifts in chromium	136
32	Tadahiko Mizuno (left) and George Miley (right) Photo: S.B. Krivit	137
33	Diagram of thin-film electrolysis in packed bed method	139
34	James Patterson (Photo: D. Nagel)	140
35	Miley - Transmutation product yields from Ni-H LENRs	143
36	Diagram of thin-film electrolysis on substrate method	146
37	Richard Oriani (Photo: S.B. Krivit)	173
38	Steven B. Krivit, Rudi, Silvia, Judith Gluck, Peter Gluck	177
39	Thomas Passell (Photo: S.B. Krivit)	186
40	Arata-Zhang - Double-structure palladium cathode	190
41	Some of the elemental changes reported by Mizuno and Ohmori in 2000 [Periodicity]	193
42	Iwamura / Mitsubishi electrolysis diffusion apparatus	196
43	Yasuhiro Iwamura (Photo: D. Tran)	197
44	Iwamura - gas permeation with multilayer substrate	201
45	Iwamura - deuterium gas permeation experiments temporally correlated growth of Mo, reduction of Sr	201
46	Iwamura - Mitsubishi LENR transmutations observed	201
47	Numerical summary of transmutations observed by Iwamura/Mitsubishi group	202
48	Dennis Letts, Frank Cameron and the 1991 Rio Solacama Mining Camp military police.	203
49	Pamela Mosier-Boss (Photo: S.B. Krivit)	216
50	SPAWAR thermal imaging video as the cathode begins to warm up (left) and a few minutes later (right)	220
51	Formation of circular and square rods (top), a folded thin film, (bottom) (Photos: P. Mosier-Boss)	221
52	Evidence of possible flash boiling of palladium that had solidified quickly in a 2003 experiment. Photo: Charlie Young	222
53	Urutskoev group's exploding electrical conductor chamber (Photo: Kirill Alabin)	238

54	Urutskoev's plasma physics group in 2011 at Sokhumi Institute of Physics and Technology	239
55	Domenico Cirillo (Photo: S.B. Krivit)	241
56	Elements detected on tungsten cathode after Cirillo's electrolysis experiment	242
57	Bottom of the glass cell after the explosion (Photo: Tomio Gotoh)	246
58	Koldamasov-type cell in operation at a Russian laboratory	251
