To: Shishir P. Deshpande, ITER India Project Director

Dear Dr. Deshpande,

On the home page of the ITER India Web site, <https://www.iter-india.org>, you have a major factual error. It says:

"ITER will produce at least ten times more energy than the energy required to operate it."

This error has been on your Web site at least since March 6, 2009, and for almost nine years, nobody has noticed it, nobody has corrected it.

There are three ways you can correct it:

1. ITER will produce at least 1.6 times more thermal power than the electrical power required to operate it.
2. ITER will produce 0.6 times the thermal power, if converted to electrical power with 40% efficiency, than the electrical power required to operate it.
3. ITER's plasma will produce at least ten times more power than the power injected into it.

Most kind regards,

Steven
