Dr. Kijung Jung
Director, ITER Korea Domestic Agency

Dear Dr. Jung,

I wrote to you on Dec. 17, 2017, and advised you that your organization is making a false scientific claim on its Web site at [this URL](#): "Developing and constructing a 500MW electricity-producing plant."

I also advised you that the claim at [this URL](#) (moved from [this URL](#)) was also false: "the International Nuclear Fusion Test Laboratory (ITER) with a thermal output of 500 MW and an energy amplification rate (Q) of 10 or higher."

Obviously you know that ITER is not designed to produce electricity. I also believe that you know that the net thermal output of the ITER reactor is designed to be 200 MW, not 500 MW.

You wrote back to me on Jan. 9, 2018 and said "We will check it and correct if necessary."

I am sure that you would want to represent the claims of the Korean ITER Domestic Agency as honestly, completely and transparently as possible. Therefore, I am wondering, did you forget to check those Web pages?

Kind regards,

Steven Krivit
